PROFESSIONAL SUMMARY

Java Developer with 8 years of experience designing and building microservices, REST APIs, and cloud-native applications on AWS and OpenShift. Skilled in database migration, CI/CD, and performance optimization, with hands-on experience adopting Agentic SDLC practices (Claude Code, Cursor Agent Mode, GitHub Copilot Agent) to accelerate development, refactoring, and test automation.

TECHNICAL SKILLS

Language & Frameworks: Java, Spring Boot, Microservices, REST APIs

Database: Oracle, PostgreSQL

Cloud & DevOps: OpenShift (OCP), AWS (EC2, EKS, RDS), Docker, Kubernetes, Helm, Jenkins, Maven, Nexus

Agentic SDLC / AI Tools: Cursor (Agent Mode), GitHub Copilot (Agent Mode), AI-assisted code migration, refactoring & test generation

Tools & Practices: IntelliJ, Eclipse, Cursor, Postman, Insomnia, Bitbucket, Jira, Confluence, Agile/Scrum, Agentic SDLC

EXPERIENCE (~ 8 YEARS)

Software Development Specialist | Amdocs | Aug, 2022 to Present

- Working on modernization of current legacy code base, creating microservices to build a robust architecture with CI-CD enablement (Off-WebLogic), using Java, Spring Boot, REST APIs, PostgreSQL, SQL, Docker, Kubernetes, Helm, OpenShift Container Platform, AWS, Jenkins, Maven, Nexus, and Bitbucket; responsible for creating & presenting **Low Level Design (LLD)**, POC implementation, design modules, and Database performance optimization initiatives.
- Working on DB migration **Oracle to Postgres** (Off-Oracle) which involves creating baseline after converting the packages through AWS SCT tool & design of Functional Test execution which can run conditionally on both the DB using **Factory Design Pattern**; helped fixing functional defects to achieve the Regression test automation execution pass rate up to **97%**.
- Built custom **Liquibase Plugin** to execute multiple SQL files/scripts in multi-schema. And enhanced the plugin configuration with multiple execution bundle to provide Hotfix which is reducing turnaround by **30%**; and provided implementation of DB Tier Customization to the Customer.
- Contributing to an **AI Harness** for **Agentic SDLC** governance - defining outcome, capabilities & missions in **swarms, hubs, and business-line** operating models to standardize how AI agents collaborate across the software delivery lifecycle.
- Adopted Agentic SDLC practices using Cursor (Agent Mode) for automated refactoring, code generation, and test creation; used GitHub Copilot Agent Mode to streamline large-scale code migration, reducing manual effort by **50%**.
- Resolved CheckMarx, FOSS, BlackDuck, Twistlock, and Penetration Testing (PST) defects to ensure secure, compliant releases.
- Conducted knowledge-sharing sessions and mentored junior developers, fostering team-wide skill growth; involved in Sprint planning, Backlog Refinement, Code Review, Giving Demo to the Stakeholders, analyzing the User Stories accurately and Release Documentation review before giving release hand over to Delivery Team.

Application Development Analyst | Accenture | Sept, 2020 to Aug, 2022

- Developed and enhanced REST APIs for critical business modules, delivering **100%** of sprint commitments with thorough unit testing.
- Resolved security vulnerabilities flagged by Fortify, Sonatype, and WebInspect to meet enterprise compliance standards.
- Collaborated in Agile ceremonies (backlog refinement, sprint planning, reviews), Product Requirement call with Product Owner, BA & Onshore Development Lead ensuring on-time delivery of **100%** user stories.
- Analyzed production logs via Splunk Enterprise, reducing incident resolution time by **35%**.

System Engineer | TCS | Mar, 2018 to June, 2020

- Performed transaction reconciliation and resolved batch failures in the tax module, preventing payment delays and escalations.
- Supported Policy Claim, Tax & Annuity modules in production, handling change requests and data-correction service tickets.

EDUCATION

B.Tech in Electronics & Communication Engineering (ECE) - West Bengal University of Technology, 2013-2017
